

CHAPTER – 01

INTRODUCTION

1.1 – Project Overview

Food Ordering. Consumer Trends: A Detailed Look at Choices and Habits Using Tableau

The rise of food delivery platforms has completely changed how people order and eat food. To make decisions, restaurants, food delivery companies and business leaders need to understand how customers order food what they like, how much they spend and how satisfied they are. This project aims to study food ordering behavior and consumer trends using Tableau to find insights from food order data.

The project looks at factors, including customer demographics, favorite cuisines, meal types how often they order, spending habits, delivery performance and customer ratings. By using Tableaus data visualization tools we create dashboards and stories to spot trends, patterns and key performance indicators (KPIs) that affect customer choices and ordering habits.

Food ordering behavior and consumer trends are topics that involve many factors.

We focus on food ordering behavior and consumer trends to understand what drives customer decisions.

The analysis helps stakeholders understand which cuisines and meal categories are most popular. It also shows how customer preferences vary across age groups and locations. Additionally it identifies what factors contribute to customer satisfaction.

The project evaluates revenue contribution order distribution, delivery times and customer ratings to support data-driven business decisions.

This information helps food delivery platforms optimize their services.

Through analytics this project provides actionable insights that can help food delivery platforms improve their services. These insights can also enhance marketing strategies. Increase business profitability.

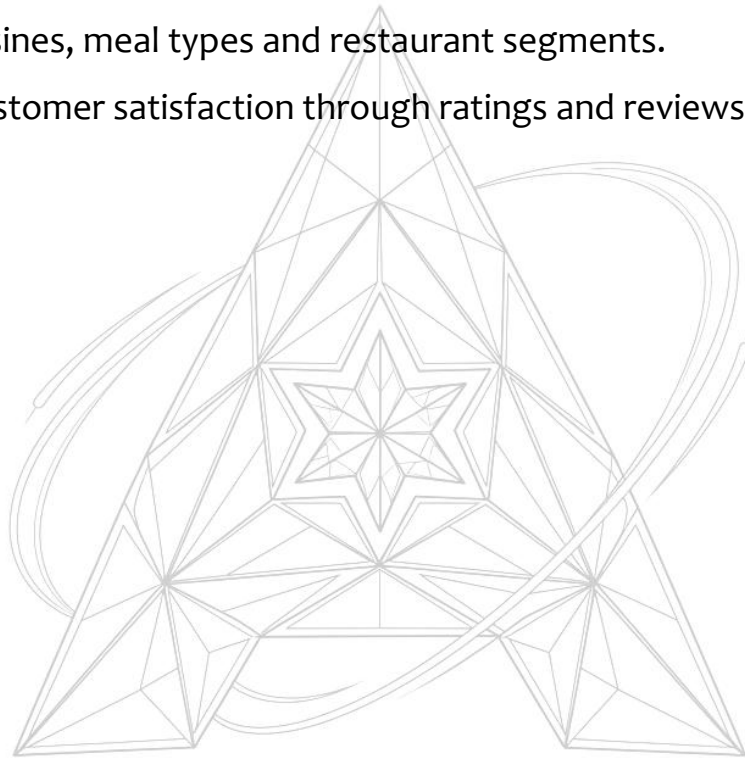

Food Ordering Behavior and Consumer Trends: A Structured Analysis of Choices and Habits using Tableau

The final Tableau dashboard offers an interface that enables users to explore consumer trends.

It provides an understanding of food ordering behavior and consumer trends.

Project Objectives

- * Analyze customer food ordering patterns and preferences.
- * Identify cuisines, meal types and restaurant segments.
- * Evaluate customer satisfaction through ratings and reviews.
