

CHAPTER – II

IDEATION PHASE

1.2 – Purpose of the Project

Food Ordering Behavior and Consumer Trends: A Structured Analysis of Choices and Habits Using Tableau

The food delivery business has grown a lot because people's lifestyles are changing more people are using technology and online ordering platforms are convenient. But companies often have trouble understanding what customers like how they buy, how much they. How happy they are with large amounts of food ordering data. Without analysis companies may struggle to find popular foods make menu changes improve delivery times and make customers happier.

This project is about turning food ordering data into useful information using Tableau for data visualization and analysis. The study looks at how consumers order food what meals they prefer, revenue trends, customer ratings and delivery performance in areas and groups. By finding patterns and trends the project aims to give a complete understanding of customer behavior and help companies make decisions based on data.

The interactive Tableau dashboards and stories created in this project let stakeholders track performance indicators (KPIs) find consumer trends and get insights that can help improve how well the business runs, customer satisfaction and profits.

Key Problems Addressed

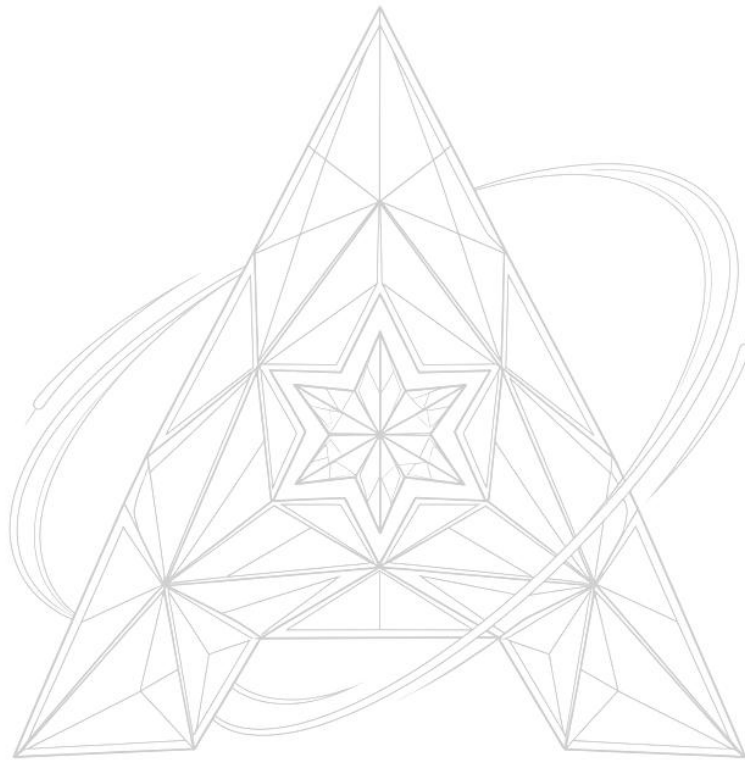

- * Lack of understanding of what customers like to order.
- * Difficulty in identifying cuisines and meals.
- * Limited visibility into how customers spend and revenue patterns.
- * Challenges in evaluating customer satisfaction through ratings and feedback.
- * Inadequate analysis of delivery performance and order fulfillment.

- * Difficulty in comparing consumer behavior across age groups, cities and restaurant segments.
- * Absence of dashboards for effective monitoring and decision-making.

Project Goal

To analyze food ordering behavior and consumer trends using Tableau and create dashboards that provide insights for improving customer experience, operational performance and business growth through food ordering data.

The goal is to help companies understand their customers better.
