CHAPTER – III REQUIREMENT ANALYSIS

3.1 – Customer Journey Map

Food Ordering Behavior and Consumer Trends: A Structured Analysis of Choices and Habits using Tableau

Awareness

Consideration

Decision & Ordering

Payment

Order Tracking

Delivery Experience

Consumption

Feedback & Loyalty

Key Tableau Metrics for Each Stage

We need to look at the metrics for each stage of the customer journey.

The first stage is Awareness.

For Awareness we want to know the Number of App Visits because this tells us how many people are looking at our app.

We also want to know the Promotion Response Rate, which shows us how well our promotions are working.

And we need to know what people are searching for so we track Popular Cuisine Searches.

The next stage is Consideration.

At this stage people are thinking about where they want to eat so we track Restaurant Views.

We also want to know how time people spend looking at menus, which is Menu Browsing Time.

Food Ordering Behavior and Consumer Trends: A Structured Analysis of Choices and Habits using Tableau

And it is good to know what kind of food people like so we do Cuisine Preference Analysis.

Then there is the Ordering stage.

Here we want to know the Total Orders because this tells us how many people are actually ordering food.

We also want to know the Average Order Value, which shows us how much people are spending.

And we need to know how well our cart is working so we track Cart Conversion Rate.

After ordering there is the Payment stage.

At this stage we want to know about the Payment Method Distribution, which shows us how people are paying.

We also want to know the Payment Success Rate because we want to make sure payments are going through.

Next is the Delivery stage.

Here we want to know the Average Delivery Time because people want their food to arrive quickly.

We also want to know the Delayed Order Percentage, which shows us how often orders are late.

We track the On-Time Delivery Rate because we want to know how often orders arrive on time.

Then there is the Satisfaction stage.

At this stage we want to know the Customer Rating Score, which shows us how happy people are.

We also want to know what people are saying about us we do Review Sentiment Analysis.

And we want to know how often people come back. We track Repeat Order Rate.

The final stage is Loyalty.

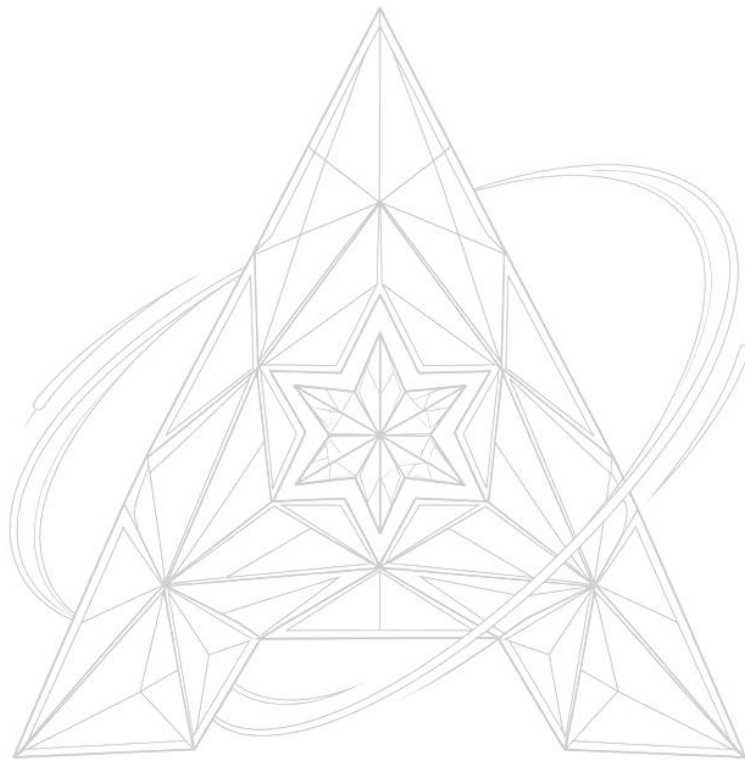

For Loyalty we want to know the Customer Retention Rate because we want to keep our customers.

We also want to know how often people reorder so we track Reorder Frequency.

And we want to know how well our loyalty program is working so we track Loyalty Program Participation.

These metrics, for Tableau help us understand the customer journey.
