

Food Ordering Behavior and Consumer Trends: A Structured Analysis of Choices and Habits using Tableau

TEAM ID	SWTID – 2026-5802
PROJECT TITLE	Food Ordering Behavior and Consumer Trends: A Structured Analysis of Choices and Habits using Tableau
MAX MARKS	5 MARKS

4.2 – Proposed Solution

The idea is to create a dashboard using Tableau that looks at how people order food and what they like. This system will take all the data about food orders make sense of it and show it in a way that's easy to understand. It will help us figure out what customers like, when they order, how well the delivery is and how much they spend.

By using pictures and numbers to show the data this dashboard will give people in charge an idea of what customers are doing and what they like. This will help them make decisions based on what the data says.

Key Components of the Solution

Data Collection and Integration

We will get all the data about food orders from the datasets we have.

We will then connect this data to Tableau so we can look at it.

We will make sure the data is good and clean before we use it.

Food Ordering Behavior and Consumer Trends: A Structured Analysis of Choices and Habits using Tableau

Consumer Behavior Analysis

We will look at what kinds of food people order a lot.

We will find out when people usually order food and how often.

We will study how different groups of customers spend their money.

Delivery Performance Evaluation

We will see how long it takes to deliver food on average.

We will compare how well the delivery is in cities and areas.

We will try to find out what makes customers happy or unhappy.

Interactive Dashboard Development

We will make charts and maps that change when you interact with them.

We will let users look at trends in cities, kinds of food age groups and how much people spend.

We will make it possible for users to look deeper into the data if they want.

Trend Identification and Forecasting

We will try to find out what kinds of food are becoming popular.

We will look at how people order food at times of the year and day.

Food Ordering Behavior and Consumer Trends: A Structured Analysis of Choices and Habits using Tableau

We will help businesses plan for the future by looking at trends.

Expected Outcomes

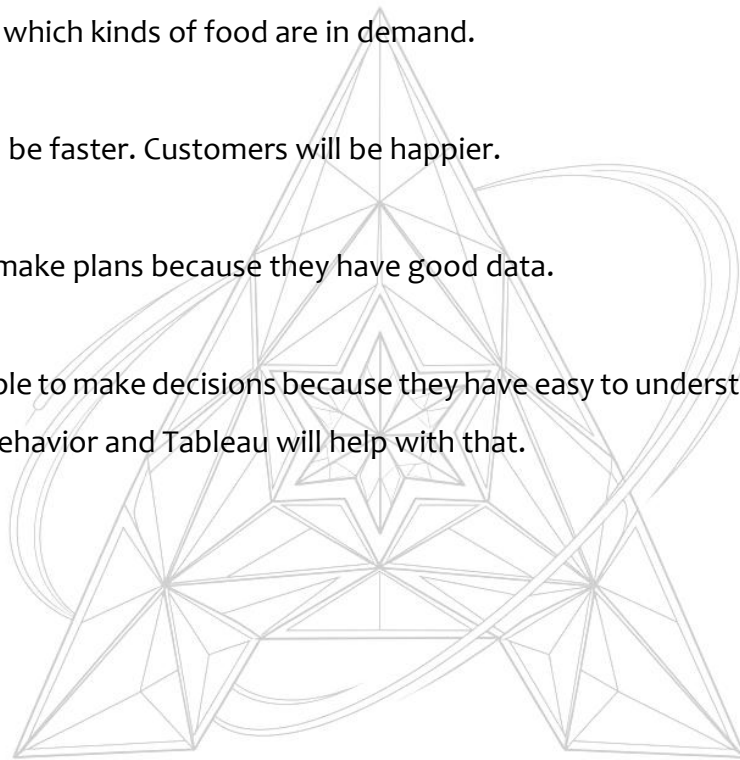

We will know more about what customers like to eat.

We will find out which kinds of food are in demand.

The delivery will be faster. Customers will be happier.

Businesses will make plans because they have good data.

People will be able to make decisions because they have easy to understand reports, about food ordering behavior and Tableau will help with that.
