

Food Ordering Behavior and Consumer Trends: A Structured Analysis of Choices and Habits using Tableau

9.2 – Disadvantages

- Food Ordering Behaviour and Consumer Trends: A Close Look at Choices and Habits"

Data Scope is Limited:

- Our results are based on the data we have which might not represent every customer or region.

Data Quality is a Concern:

- If the data has mistakes is incomplete or has duplicates our analysis might not be accurate.

Peoples Tastes Change:

- Customer preferences and food trends change over time which means our insights might not be relevant in the future.

We Look at Past Data:

- Our project usually uses data, which might not show what happening in the market right now.

Data Might Be Biased:

- If our data only comes from places, age groups or restaurants our findings might not be fair.

We Don't Consider Everything:

- Things like weather, festivals, promotions, economy and seasons can affect food orders. We might not include them in our analysis.

We Handle Customer Data with Care:

- We have to be careful with customer data to avoid any privacy or security issues.

We Rely on Visualization Tools:

- Our insights depend on tools, like Tableau and if the dashboard is not designed well people might misunderstand the data.

We Can't Predict the Future:

Food Ordering Behavior and Consumer Trends: A Structured Analysis of Choices and Habits using Tableau

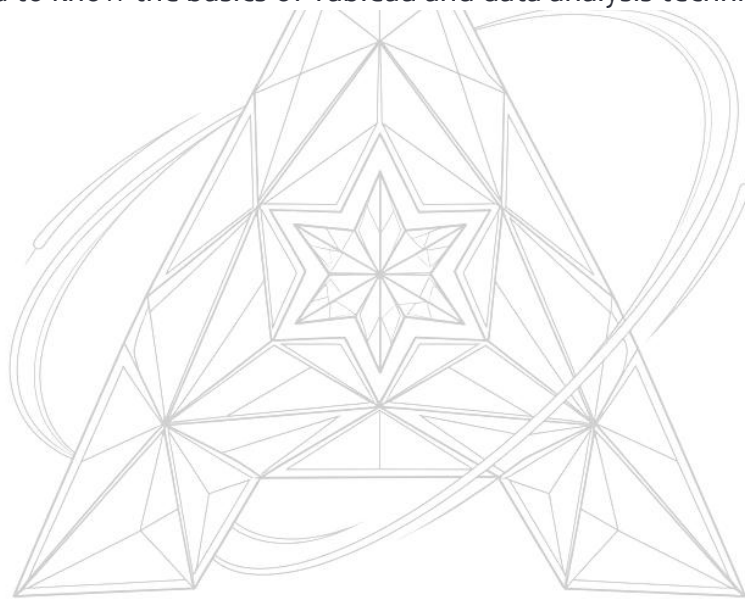

- Our project mainly looks at data and might not accurately predict what customers will do in the future.

We Need to Update Our Analysis:

- Dashboards and reports need to be updated when new data comes in.

Technical Issues Can Happen:

- Big datasets can make our dashboard slow.
- Cleaning and preparing data can take a lot of time.
- You need to know the basics of Tableau and data analysis techniques.
